

THE "ACE" SAND SEPARATOR WITH EROSION TUBE

The "ACE" Sand Separator with Erosion Tube is a safer, longer-lasting sand separator. The fully-machined sand spiral is sheathed first by a hard barrel with a matching spiral cut, so the blades thread into that which we call the "erosion tube," then we sheath that with an even heavier tube.

The "ACE" Sand Separator design provides 2.5-4 times the life span versus the most popular sand separator commonly run and exhibits a much wider volume range per size yielding far better and longer-lasting performance.
